

How does it stack up?

1. Each team will receive 4 “clue cards.” Each clue card will be assigned to a different person in the group.
2. The clue card can ONLY be read by the person it was assigned to. NO CHEATING! 😊
3. BEFORE DOING ANYTHING, have each person read their clue card.
4. Once everyone has read their card, use the Unifix cubes to construct your 3-D model of the atmosphere.
5. You can revisit each clue card, but remember only the person assigned can read the clue.
6. Once your team has constructed the 3-D model construct a 2-D model on the sheet provided. Make sure to label all the regions, making sure to include the temperatures (w/ the “spheres” and “pauses”).
7. Using the data from your 2-D model, create a line graph.
